

PROJECT DOSSIER • CONFIDENTIAL

How we built *Hyventur*, from first prompt to production.

The genesis, research, messaging,
technology, and forward roadmap
behind the Hyventur payment-
platform marketing site.

Hyventur Leadership	Product & Design Studio	1.0 · June 2026	hyventur.vercel.app

00 EXECUTIVE SUMMARY

What this document is

Hyventur is a modern, compliance-first payment platform for accounts receivable, billing, and collections. This dossier records how the marketing site was conceived and built — the brief, the research, the messaging framework, the technology, the imagery, and an honest account of where the project sits today and what a production-grade future looks like.

It is written to be read by a non-technical stakeholder and a technical one alike. The narrative sections explain *why* each decision was made; the technical sections give precise, verifiable facts about the stack, hosting, and security posture — including a candid path to SOC 2 readiness and a dedicated AWS environment should the business choose to pursue them.

6

DAYS, BRIEF TO LAUNCH

21

PAGES & ROUTES SHIPPED

9INDUSTRY VERTICALS
ADDRESSED

01 GENESIS & BRIEF

Where it started

The project began with a single strategic goal: give Hyventur a **Stripe-grade marketing presence** that could stand next to the incumbents in the collections and receivables software market and read as more modern, more trustworthy, and clearer than any of them.

The brief, in the client's own words, established a small number of non-negotiables. These directives shaped every decision that followed:

- **Own project, own space.** Hyventur is fully independent — its own repository, its own brand, its own infrastructure, unaffiliated with any other venture.
- **StoryBrand messaging.** Donald Miller's framework: the customer is the hero, Hyventur is the guide. Clarity over cleverness.
- **An interactive product demo.** Not screenshots — a real, clickable dashboard and consumer payment portal a prospect could explore.
- **Honest metrics.** Every number is either sourced or clearly labeled illustrative. No invented precision. This was called out at kickoff and has been enforced throughout.
- **Enterprise credibility.** High-volume, realistic data; a five-way competitive comparison; deep integration coverage; a site-wide assistant for visitor questions.

GUIDING PRINCIPLE

Because Hyventur is a new company without a live customer base, the site was deliberately built to **sell the capability of the technology** — never to claim customer outcomes it cannot yet substantiate. Where the platform vision is shown (e.g. dashboard metrics), it is labeled as an example.

What we studied before we built

Positioning is only credible if it is grounded in the real market. We ran a structured scan of the collections-payments landscape — reading the incumbents the way a prospect would, then the way a competitor would.

PRIMARY COMPETITIVE TEARDOWN

[Tratta.io](#) was studied in depth as the closest modern analogue: their messaging, page architecture, product showcases, trust signals, and differentiation claims. The takeaway shaped our counter-position — Hyventur would match Tratta on compliance credibility while beating it on **messaging clarity** and **interactive proof**.

FIVE-WAY COMPARISON SET

PLATFORM	STUDIED FOR
Hyventur	The subject — positioned as the unified, compliance-first modern option.
Tratta	Modern cloud-native positioning, omnichannel, compliance-first narrative.
ezPay365	Consumer payment portal and self-service feature set.
Channe1 Payments	Omnichannel outreach and campaign orchestration.
Payment Savvy	Processing breadth, ACH/card coverage, compliance handling.

MARKET CONTEXT (2026–2027)

The scan confirmed three forces defining the space right now: **Regulation F** maturing from implementation into active enforcement; **consumer-experience expectations** converging with modern fintech checkout; and a persistent **staffing squeeze** that makes self-service and automation operational necessities rather than nice-to-haves. Hyventur's messaging speaks directly to all three.

03 POSITIONING & CORE MESSAGING

The StoryBrand spine

Every page is built on Donald Miller's StoryBrand arc. The discipline of the framework is what keeps the copy clear: the customer is always the hero with a problem, and Hyventur is always the guide with a plan.

ELEMENT	HOW HYVENTUR EXPRESSES IT
Character	The AR / billing / collections operator under pressure to get paid.
Problem	Legacy tools lose payments, create compliance risk, and fragment reporting.
Guide	Hyventur — built by people who understand receivables and compliance.
Plan	Connect → Configure → Get Paid. No rip-and-replace.
Call to action	Get a live demo; explore the dashboard.
Success	Customers pay easily; compliance runs quietly; reporting is real-time.
Failure avoided	Lost revenue, compliance exposure, and manual overhead.

TWO POSITIONING PILLARS

COMPLIANCE-FIRST

The foundation, not a feature

SOC 2 & PCI Level 1 posture, FDCPA / Reg F-aware workflows framed as the ground everything stands on.

RECEIVABLES-FIRST

Beyond collections

Language broadened from "collections" to accounts receivable, billing, and collections — widening the addressable audience.

HONESTY PASS

A dedicated revision removed every unverifiable claim — specific recovery-rate lifts and deployment guarantees — and replaced them with capability and technology language. The example dashboard carries an explicit "illustrative metrics" label.

04 IDEAL CUSTOMER PROFILE

Who Hyventur is built for

Hyventur's ideal customer is a mid-size to enterprise accounts receivable or collections operation — a collection agency, debt buyer, creditor, healthcare billing organization, or collection law firm — processing \$1M+ in monthly receivables across a multi-channel consumer base.

They are running legacy payment software or a patchwork of disconnected tools that create compliance gaps, manual overhead, and consumer friction. Their operations team is under pressure to improve recovery and reduce regulatory risk (FDCPA, Regulation F, HIPAA) without adding headcount.

FIRMOGRAPHIC

\$1M+ monthly receivables
· mid-market to enterprise
· multi-channel consumer base · regulated industry.

BUYING TRIGGERS

A compliance gap that got exposed · a mandate to modernize · a growth event (new portfolio, vertical, or client).

DISQUALIFIERS

Wants a generic processor
· no compliance complexity
· single low-volume channel · no operations team.

They are not looking for a generic payment processor — they need a platform that understands the regulatory complexity of their industry and can replace several vendors with one compliant, omnichannel solution.

How the site is structured

Twenty-one routes, organized so a prospect can self-qualify quickly and a sales rep has a purpose-built tool for every moment of the conversation.

ROUTE	PURPOSE
/	Home — hero, problem, guide, plan, platform grid, comparison teaser.
/platform	Full capability detail across every payment channel.
/solutions	Nine industry verticals, each with tailored value.
/integrations	45+ partner platforms, browsable.
/pricing	Tiers plus the five-way competitive comparison.
/insights	Long-form articles / thought leadership (9 pieces).
/about	Firm narrative, values, leadership.
/contact	Demo request and direct contact.
/dashboard	Interactive product dashboard demo (left-rail app).
/overview	Sales weapon. Full StoryBrand pitch page with next steps.
/one-pager	Print-to-PDF leave-behind for reps.

TWO PURPOSE-BUILT SALES ASSETS

/overview is a single shareable link that walks a prospect through the entire StoryBrand arc and ends on three clear next steps. **/one-pager** renders a one-page snapshot a rep can save as a PDF from the browser and leave behind after a meeting.

06 DESIGN SYSTEM & VISUAL LANGUAGE

The brand, in code

The visual system is tokenized so the whole site stays consistent and is trivially themeable. It reads as clean, modern fintech — deliberately closer to Stripe than to a legacy collections vendor.

COLOR**Navy ink + crimson**

Deep ink/charcoal (from the logo "H") as the primary; a crimson growth-arrow accent; cool off-white and mist surfaces.

TYPE**Inter, tuned**

A single clean grotesque across the site for a Stripe-like read, with a disciplined type scale and weight system.

MOTION**Restrained reveals**

Scroll and load animations via Motion, always gated behind reduced-motion for accessibility.

MARK**Geometric icon**

The Hyventur "H" with a rising crimson arrow — used as logo, favicon, and header mark from a single source asset.

07 IMAGERY & ART DIRECTION

Where the pictures came from

Photography elevates a fintech site from "template" to "real company." Rather than license generic stock, the imagery was **generated with OpenAI's image generation** and then curated and art-directed for authenticity to the collections and receivables world.

DIRECTION & PROCESS

- 01 Brief the scene.** Each image was prompted to a specific, believable moment — an operations floor, a consumer paying on a phone, a candid team, leadership headshots.
- 02 Curate for authenticity.** Only frames that read as a genuine collections / AR operation were kept; anything that felt generic was discarded.
- 03 Integrate optimized.** Every asset is served through the framework's image pipeline — responsive sizing, modern formats, lazy loading — so quality never costs page speed.

OPERATIONS

Call-center / operators floor — used on the solutions hero to ground the "who we serve" story.

CONSUMER

Person paying on a phone — the "easy dollar" the whole product is built to capture.

TEAM

Candid office collaboration — the guide, made human, on the about page.

LEADERSHIP

Headshots for the named leadership team, presented with role and title.

Inspiration for the product demo

The interactive dashboard is the site's proof of substance. Its language and metrics were drawn directly from what a real collections operations leader watches every day — so it reads as an instrument a practitioner would recognize, not a generic chart.

THE VOCABULARY WE CHOSE

METRIC	WHY IT'S ON THE SCREEN
Recovered (MTD)	The number every operator reports upward — dollars actually recovered, at enterprise scale.
Collection Rate	Shown against an industry average so performance has context, not just a figure.
Accounts Touched	Coverage and reach across the portfolio.
Channel Performance	Portal, Text2Pay, IVR, and Payment Plans side by side, each with a conversion rate.

REALISM, HONESTLY LABELED

An earlier version used a random "squiggle" chart. It was replaced with a **cumulative recovery curve** that only climbs, with believable weekday/weekend variation, and payment tables expanded to enterprise row counts. The whole panel is explicitly marked as an **example dashboard with illustrative metrics**.

What it's built with

A current, production-grade React stack chosen for speed, type-safety, and long-term maintainability.

LAYER	TECHNOLOGY	VERSION
Framework	Next.js (App Router, Turbopack)	16.2.6
UI runtime	React / React DOM	19.2.4
Language	TypeScript	5.x
Styling	Tailwind CSS (zero-config, @theme)	4.x
Components	shadcn / @base-ui/react	4.7 / 1.4
Animation	Motion	12.38
Icons	lucide-react	1.14

The site renders as **static, pre-rendered HTML** wherever possible — every marketing route is generated at build time, which makes it fast, cheap to serve, and inherently resilient.

10 HOSTING & DEPLOYMENT

Where it lives, and how it ships

Source control and hosting are wired together for continuous deployment: a push to the repository triggers an automatic production build and release.

11 SECURITY POSTURE – CURRENT

An honest account of where security sits today

The site is a **static marketing site**. It does not currently collect, store, or process consumer PII or live payment data, which keeps its real-world attack surface small. The following HTTP security headers are enforced on every response:

CONTROL	VALUE / EFFECT	STATE
HSTS	2-year max-age, includeSubDomains, preload — forces HTTPS.	● In place
X-Content-Type-Options	nosniff — blocks MIME-type sniffing.	● In place
X-Frame-Options	SAMEORIGIN — clickjacking protection.	● In place
Referrer-Policy	strict-origin-when-cross-origin.	● In place
Permissions-Policy	Camera, mic, geolocation, FLoC disabled.	● In place
Image CSP	Sandboxed SVG handling; script-src none on image assets.	● In place
TLS	Managed HTTPS certificate on the hosting domain.	● In place

IMPORTANT DISTINCTION

The "SOC 2" and "PCI Level 1" credentials shown in the marketing copy describe the **intended posture of the Hyventur product** as it goes to market — they are positioning for the platform vision, **not current certifications of this marketing website**. The sections below describe exactly what earning them for real would involve.

12 PATH TO SOC 2 READINESS

What real SOC 2 would take

SOC 2 is not a setting you switch on — it is an independent audit of how an organization operates over time against the Trust Services Criteria (security, availability, processing integrity, confidentiality, privacy). A realistic path:

- 01 **Define the entity & scope.** Decide which systems and data are in scope — here, the product application and its infrastructure, not just the marketing page.
- 02 **Write the policies.** Access control, change management, incident response, vendor management, business continuity, and more — the documented controls an auditor tests against.
- 03 **Instrument continuous monitoring.** Adopt a compliance platform (e.g. Vanta or Drata) to continuously collect evidence — MFA enforcement, encryption, logging, access reviews.
- 04 **Run the observation window.** Type I attests design at a point in time; Type II attests operation over a period, typically 3–6 months of evidence.
- 05 **Engage a licensed CPA firm.** Only an accredited auditor can issue the report. Budget for their fieldwork and remediation cycles.

TYPICAL TIMELINE

3–6 months to a Type II, once controls and monitoring are in place.

PREREQUISITE

A real backend that handles data — most meaningful once the v2 product exists.

ADJACENT

PCI DSS applies specifically to cardholder data and is largely inherited from a compliant payment processor.

13 MIGRATION TO DEDICATED AWS

Standing it up on its own AWS

Vercel is the right home for a fast-moving marketing site. If the business later wants everything under a single owned AWS account — for procurement, data-residency, or SOC 2 scope reasons — the migration is well-trodden. Two shapes, depending on need:

OPTION A – STATIC SITE (CLOSEST TO TODAY)

OPTION B – FULL APPLICATION (FOR THE V2 PRODUCT)

When server-rendered features and a backend arrive, run the app on **AWS Amplify Hosting** (managed, closest to the Vercel workflow) or on **ECS/Fargate behind an Application Load Balancer** for full control, with RDS or a managed database, all inside a VPC. This is also the environment that makes a SOC 2 scope coherent.

CONCERN	AWS SERVICE
Static hosting / origin	S3
CDN + TLS termination	CloudFront + ACM
DNS	Route 53
Managed app hosting	Amplify Hosting / ECS Fargate
Edge firewall	AWS WAF
Secrets & identity	IAM · Secrets Manager

CONCERN	AWS SERVICE
Logging / evidence	CloudWatch · CloudTrail

14 ROADMAP & NEXT STEPS

From marketing site to platform

SHIPPED

Marketing site & sales tools

Full site, interactive demos, /overview pitch page, and /one-pager — live on Vercel today.

NEAR TERM

Backend for the contact form

Persist demo requests (Supabase or a form service) so no lead is lost.

V2 — PRODUCT

Real authenticated portal

Supabase auth + persistence, a genuine client portal (not seeded), and a CMS for insights.

WHEN WARRANTED

Dedicated AWS + SOC 2

Migrate to an owned AWS account and pursue formal SOC 2 once the product handles real data.

ONGOING

Proof & case studies

As real customers land, replace illustrative metrics with sourced, attributed results.
